APPROXIMATE CHARGING TIMES

Conditions	For one day	Until movement starts working when battery is empty	Until fully charged when battery is empty
 Outdoor - sunny	2 minutes	1 minute	7 hours
 Outdoor - cloudy	11 minutes	5 minutes	1.5 days
 20 cm distance from fluorescent lamp (30 W)	35 minutes	20 minutes	5.2 days
 Interior lighting	4.4 hours	2 hours	40 days

The charging times are based on the use of a dial with 30% transparency.

QUICK START FUNCTION

1 minute exposure to sunlight.

POWER SAVING MECHANISM

Reduction of consumption
approximately 70% with pulled out stem.

BATTERY PROTECTION

As soon as the rechargeable battery reaches a very low state of charge, the movement stops working and prevents deep discharge. This provides additional protection for the battery and ensures a long service life.

OVERCHARGE PROTECTION

The overcharge protection prevents the battery from overcharging and thus impairing the function of the movement.

RECHARGEABLE BATTERY

8 months running time when fully charged,
without exposure to light.
