You have decided to buy a watch, which was assembled by a watchmaker under the Ronda movement. Please note that no watches are produced or distributed under the Ronda Brand.

In case of repairs, guarantees and claims concerning the functioning of a watch, purchasers and consumers should contact their retailer or the watch manufacturer, for which the relevant information can be found in the sales or guarantee documentation provided with the watch.

Description of the display and control buttons

</tbody>
</table>

Multifunction movement

The crown and push-buttons are equipped with C.N.T. and Bell & Ross. All functions can be operated with 1 second precision and a crown.

Initial status (chronograph hands are at zero position): - start the chronograph with push-button A - multiply the current time with push-button B - finalize the current time with push-button A (mechanical coupled)

Chronograph:
Push button B to start operation of the chronograph as soon as timing is started with push-button A.

Continuous corrective mode is activated.

The alarm cannot be adjusted when the chronograph is active.

Setting the time

- Turn the crown until you reach the correct time.
- Press the crown into position I.

Please note:
- The current time is displayed at maximum 12 hours.
- A signal is emitted for 20 seconds.

The alarm can be set maximum 12 hours before the current time. Thus, setting the time also requires the identical time.

If the reference time is not synchronized with the current time, it is read in the alarm signal timing mode at a fixed time in the alarm.

Please note:
- The alarm time is read as long as the alarm tone is not canceled.
